SOME OBSERVATIONS ON THE IN VITRO ACTIVITY
OF COLIMYCIN. [1964] [12]p. 13 refs.
Available on loan from SLA

63-14756

Trans. of Ministry of Health (Italy) 1954, v. 49, 5 Dec,
p. 4483-4488.

DESCRIPTORS: Drugs, *Antibiotics, *Colimycin,
Germicides.

It is shown that Colimycin, although less active than
polymyxin, in vitro, creates with polymyxin a family of
original antibiotics, characterized by a highly bacte-
riostatic action and above all, bacteriocidal on gram-
negative bacteria. Colimycin in combination with other
antibiotics is capable of notable synergism, especially
when other antibiotics alone have moderate activity.

omitted).

Order from SLA \$1.10

61-16472

Trans. of Minerva Medica (Italy) 1961, v. 52 [no. 10]
p. 363-366.

DESCRIPTORS: *Androgens, Pediatrics, Children, In-
fants, *Methandrostenolone, *Body weight

Results of the peroral use of methandrostenolone in a
total of 136 cases are reported. The patients, many of
whom were less than 2 years old, were underdeveloped
and underweight because of feeding difficulties of a
neural origin, infectious diseases, etc. A positive
response in terms of weight gain occurred in a high
percentage of cases. Virilizing effect is practically
absent in doses up to 1 mg/kg daily.

61-16476

Trans. of Minerva Medica (Italy) 1961, v. 52 [no. 10]
p. 382-383

DESCRIPTORS: *Androgens, *Liver, *Heart, Pathology,
Therapy, *Methandrostenolone

Clinical experience in the treatment of two groups of
patients (chronic liver disorder and chronic cardiac
insufficiency respectively) is reported. Methandro-
stenolone therapy with a daily dose of 15 to 25 mg for a
period of 5 to 32 days, with larger doses for a short
period in 6 cases, was effective and without any
essential side effects

CLINICAL USE OF A NEW TESTOSTERONE DERIVATIVE (DIANABOL) WITH ANABOLIC ACTION (Impiego Clinico di un Nuovo Derivato del Testosterone (Dianabol) ad Azione Anabolizzante) [1961] 5p.
Order from SLA \$1.10

61-16475

Trans. of Minerva Medica (Italy) 1961, v. 52 [no. 10]
p. 393-394.

DESCRIPTORS: *Androgens, *Testosterone.

Dianabol is shown clinically to be well tolerated in doses from 5 to 50 mg. daily. Weight gain is significant. The 5 to 10 mg. dose daily has no essential androgenic effect on females. Doses of 25 mg. or more produce a mildly androgenic effect after one month of treatment.
